

SUMMARY

Pre-final year Engineering student specializing in data engineering and AI systems, with hands-on experience building ETL pipelines, analytics dashboards, and AI-powered applications. Skilled in Python, Airflow, FastAPI, and SQL, with a focus on scalable data systems and real-world problem solving

WORK EXPERIENCE

- Data Engineering Intern | SPRINGER CAPITAL |

January 2026 - April 2026

 - Built and orchestrated 2+ end-to-end ETL pipelines using Python, Apache Airflow, and PostgreSQL for structured data ingestion and processing
 - Designed data transformation workflows converting raw CSV data into analytics-ready Parquet and SQL datasets (Bronze → Silver architecture)
 - Implemented automated data validation and schema checks across 5+ pipeline stages, ensuring data quality and reliability with zero manual intervention through Airflow-scheduled execution
- Data Analytics Intern | INFOSYS SPRINGBOARD | [LINK](#)

October 2025 - December 2025

 - Analyzed 6.7M+ flight records using Python and SQL to identify delay patterns across weather, carrier operations, and seasonal trends.
 - Built analytical queries and feature engineering pipelines to investigate data issues and generate insights, identifying 7.4× higher winter cancellations and 2.8× holiday delay impact.
 - Built DAX calculated measures for delay percentages and performance KPIs, presenting findings through data storytelling to highlight key operational inefficiencies for stakeholder reporting.

PROJECTS

- MedPrompt+– AI Health Assistant (Next.js, FastAPI, XGBoost) | [LINK](#)

December 2024 - February 2025

 - Developed a Next.js-based dashboard with interactive UI components to display real-time AI predictions and health insights.
 - Built end-to-end ML and Retrieval-Augmented Generation (RAG) pipeline, refining LLM outputs for clarity, factual consistency, and structured medical summaries
- AutoFlow– Visual Workflow Automation Platform (Next.js, FastAPI)| [LINK](#)

August 2025 – October 2025

 - Implemented REST API integrations and debugging workflows to monitor automation pipelines and improve reliability of AI-driven task execution
 - Built an AI workflow automation platform integrating multiple LLMs to automate document processing, API workflows, and communication tasks, reducing manual effort by 70% and demonstrating practical AI automation use cases
 - Built a responsive frontend using Next.js and React for an AI workflow automation platform, enabling users to design and execute automated pipelines through an intuitive interface
- E-commerce Analytics Dashboard (Power BI + SQL)| [LINK](#)

March 2026

 - Built a 5-page interactive Power BI dashboard with 12+ KPIs, drillthrough pages, and slicers to track revenue trends, customer retention rates, delivery SLA compliance, and seller performance
 - Designed a star schema data model with fact and dimension tables (orders, products, sellers) using Power Query transformations, enabling accurate multi-level analysis across 100K+ records

SKILLS SUMMARY

- Programming:** Python, JavaScript, C, HTML, CSS, SQL
- Data Engineering:** ETL Pipelines, Apache Airflow, PostgreSQL, Data Transformation, Parquet
- Web Development & Tools:** Next JS, Fast API, MongoDB, Git, GitHub, JIRA, VS Code
- Data Analytics & ML:** Power BI, Excel, DAX, Power Query, Pandas, NumPy, Data Cleaning, EDA, XGBoost, Tableau

EDUCATION

- Christ College Engineering

B.E. Electronics and Communication Engineering ; GPA: 8.06
Machine Learning (MINOR) , English Proficiency: C1 (Advanced)

June 2023 - August 2027
Kerala, India
- Achieved Top 2 rank in class (2 semesters)

CERTIFICATES & ACHIEVEMENTS

- Generative AI Engineering (IBM) | [CERTIFICATE](#)

December 2025
- 2× Hackathon Winner: Qbit (Jain University)

HackQuest (Rajagiri college of engineering)
